

Advanced Manufacturing Discovery Program

This program is developed by Canadian Manufacturers and Exporters to introduce technology based manufacturing careers to high school students. It is open to students majoring in a variety of courses such as Math, Sciences, Business, English, Arts, Electronics and other subjects.

This is your chance to experience first hand the creative and exciting world of modern manufacturing and explore unique job opportunities available right here in Manitoba.

Working in teams, you'll create a hovercraft design, apply a CAD engineering program to produce a prototype and manufacture a hovercraft that will be challenged over a course for its maneuverability, lift and load capabilities.

This program gives you a chance to utilize all your energetic, creative thinking, communication, and problem solving skills within your team.

To become involved with the Discovery Program talk to your teacher today about registering. More program information is available on the web along with registration forms.
